SYNAPZ™ | NVIDIA INCEPTION PROGRAM

SYNAPZ™

Governed AI Swarm Execution Infrastructure

Where Intelligence Meets Control

AI × On-Chain × Execution × Governance

512 Nodes Operational → Scaling to 1024

Enterprise-grade AI infrastructure designed for:

- financial markets
- regulated environments
- real-world systems

- financial markets
- regulated environments
- real-world systems

SYNAPZ™ | NVIDIA. INCEPTION PROGRAM

Current AI Systems Cannot Execute in Real Environments

Limitations of Current AI

- Governance layers
- Execution risk controls
- Auditability
- Deterministic policy enforcement

Deployment Blockers

- Financial markets
- Regulated industries
- Real-world operational systems

SYNAPZ™ | NVIDIA INCEPTION PROGRAM

AI Is Moving From Models → Infrastructure

First Wave:
Language Models

Second Wave:
Agents and Automation

Next Phase:
Execution Infrastructure

Systems capable of coordinating AI reasoning with controlled real-world execution.

This is the layer SYNAPZ™ is building.

SYNAPZ | NVIDIA INCEPTION PROGRAM

The SYNAPZ Solution

Governed AI Execution Infrastructure

- reason in parallel
- operate under governance constraints
- execute through controlled infrastructure

Key capabilities:

- swarm-based parallel reasoning
- deterministic policy gating
- risk-validated execution
- immutable audit logging

This bridges the gap between AI intelligence and real-world deployment.

SYNAPZ™ | NVIDIA INCEPTION PROGRAM

Production Infrastructure

This Is Not a Prototype

SYNAPZ operates as live infrastructure, not a research project.

Production environment includes:

- 50+ active services
- distributed execution stack
- modular systemd-based service architecture
- governance-enforced service routing

Services include:

- orchestration layer
- market infrastructure
- burn engine capital discipline
- maritime intelligence systems

SYNAPZ™ | NVIDIA INCEPTION PROGRAM

Core Architecture

Six-Plane AI Swarm Architecture

The SYNAPZ platform runs on a 512-node governed swarm.

Governance & Trust

policy enforcement and audit logging

Industrial Execution

trade routing, execution control, operations

On-Chain Intelligence

wallet analytics and liquidity modelling

Edge & Robotics

physical world integrations and monitoring

Media & Human Interface

user interfaces and reporting systems

Governance Model

SYNAPZ | NVIDIA INCEPTION PROGRAM

AI Operates Under Command, Never Autonomously

SYNAPZ enforces a strict execution pipeline:

User Intent → Specification → Policy Gate → Risk Gate → Human Approval → Execution → Immutable Audit Log

Core principles:

- AI never holds custody
- AI cannot bypass governance
- human authority remains mandatory

This ensures safe deployment in regulated environments.

AI never holds custody

AI cannot bypass governance

human authority remains mandatory

This ensures safe deployment in regulated environments.

AI Execution Infrastructure for Markets & Industry

SYNAPZ provides governed execution infrastructure capable of coordinating AI systems across complex operational environments.

Intelligence Ingestion

- real-time data ingestion from market, industrial, and physical systems
- multi-source signal aggregation
- structured intelligence extraction

AI Swarm Analysis

- parallel reasoning across distributed AI nodes
- pattern recognition across large data streams
- contextual decision modelling

Governed Decision Framework

- deterministic policy validation
- multi-layer risk controls
- operator approval workflows

Controlled Execution

- automated action routing through validated services
- execution monitoring and rollback capability
- immutable audit logging for accountability

Example Applications

- financial market infrastructure
- logistics intelligence systems
- maritime monitoring and environmental analytics
- industrial automation and operations intelligence

Resource & Capital Governance

Programmable Operational Infrastructure

SYNAPZ integrates governance directly into operational infrastructure, ensuring that resources, execution actions, and financial flows are validated before deployment.

Governed Resource Allocation

- policy-controlled allocation of compute, infrastructure, and operational resources
- automated validation against operational constraints

Execution Risk Controls

- multi-layer risk validation before system actions
- automated safety triggers and execution safeguards

Operational Funding Model

Revenue generated through platform infrastructure services including:

- AI execution infrastructure licensing
- intelligence data services
- enterprise automation deployments

Revenue Model

Infrastructure Monetization

SYNAPZ generates revenue across multiple layers.

Institutional Trading Infrastructure

- liquidity provision
- spread capture
- performance-based trading

AI Execution Licensing

- enterprise access to governed AI infrastructure
- AI orchestration & execution APIs

Data Intelligence Products

- on-chain analytics
- market intelligence feeds
- intelligence APIs

Industry Deployments

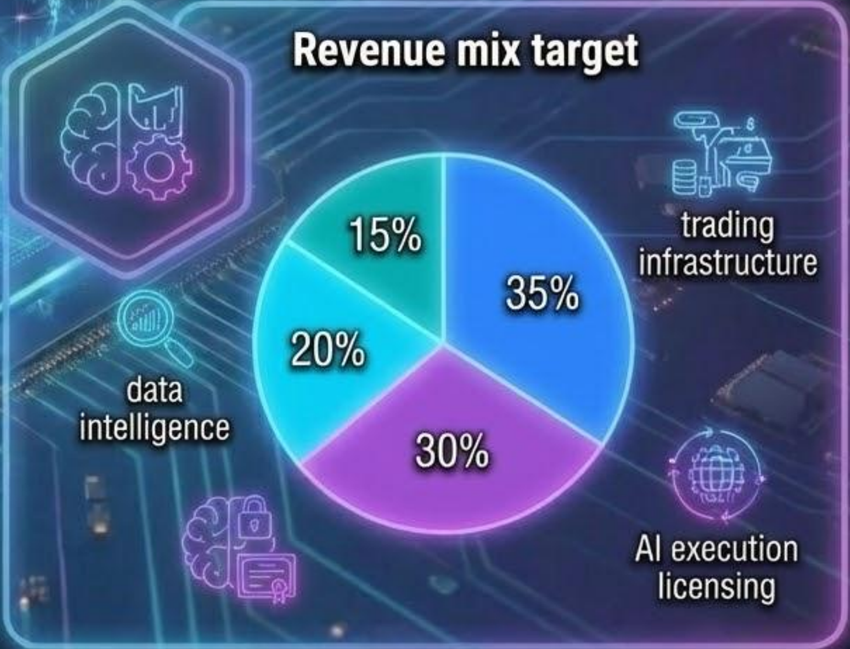
- maritime intelligence
- logistics analytics
- environmental monitoring

SYNAPZ | NVIDIA INCEPTION PROGRAM

Financial Projections

5-Year Growth Model

SYNAPZ scales through infrastructure adoption.



SYNAPZ | NVIDIA INCEPTION PROGRAM

Market Opportunity

AI Execution Infrastructure

The next phase of AI is execution infrastructure.
Markets addressed by SYNAPZ:

AI Infrastructure
$400B+

Total addressable market:
$1T+

Algorithmic Trading Infrastructure
$50B+

Industrial AI Systems
$600B+

Dathan Eldridge

Chief Executive Officer

Leading SYNAPZ AI's vision and strategic direction in AI innovation. Dathan brings extensive experience in technology leadership and business development to drive the company forward.

Strategic Vision | Business Development | Investor Relations

Katy Eldridge

Company Secretary

Ensuring corporate governance and regulatory compliance across all operations. Katy manages corporate documentation and ensures adherence to UK company law.

Corporate Governance | Regulatory Compliance | Legal Documentation

Omar Ladan

Chief Technology Officer

Driving technical excellence and AI development across all products. Omar leads the engineering team in building cutting-edge AI solutions and automation tools.

Technical Architecture | AI Development | Product Engineering

Jason Pattison

Chief Financial Officer

Managing financial strategy and sustainable growth. Jason oversees financial planning, risk management, and ensures the company's long-term financial health.

Financial Strategy | Risk Management | Budget Planning

R.R. (GadgetGoober)

Chief Marketing Officer

Driving strategic visibility and brand architecture across Synapz's AI and robotics portfolio. R.R. leads global marketing initiatives that position Synapz at the forefront of real-world asset innovation, blending narrative precision with high-impact campaigns that amplify product adoption, investor engagement, and ecosystem alignment.

Strategic Marketing | Architecture Development | Ecosystem Visibility

Chris Layton

Creative Director

Based in Los Angeles, Chris is a top KOL in the United States with a proven track record of driving attention, growth, and narrative for high impact projects. Known for original thinking and market awareness, he drives visibility, engagement, and trust at scale while helping projects cut through noise and capture real attention.

Creative Direction | Key Opinion Leader | Brand & Narrative | Social Media Strategy

SYNAPZ Leadership

SYNAPZ is building a next-generation AI swarm infrastructure platform designed to monitor, analyse, and execute across complex digital systems in real time.

The company combines distributed AI agents, market intelligence engines, and automated execution systems to create a scalable intelligence layer for digital economies.

Our leadership team brings expertise across engineering, distributed computing, blockchain infrastructure, capital strategy, and global ecosystem growth.

Together the team is building the foundation for autonomous market intelligence, real-time data processing, and large-scale AI coordination.

Core Focus Areas

- AI Swarm Infrastructure
- Real-Time Market Intelligence
- Distributed Systems & Web3
- Automated Execution Engines
- Scalable Data Processing
